

(M. F. Soper

- II — A trio of Crested Penguins (**E. pachyrhynchus**) at Jackson's Bay. This distinctive penguin has a somewhat restricted breeding range, centred on Fiordland. Other strong subspecies breed at Snares (**atratus**) and at the more southerly subantarctic islands of New Zealand (**sclateri**).

(M. F. Soper

III — Pied Stilt (*H. leucocephalus*) at a typical nest in swampy ground. This familiar bird nests in a variety of habitats from coastal beaches to c. 2500 ft. a.s.l. It is still colonizing new areas.
