

IF. C. Kinsky

XLVI — Sooty Shearwater (*Puffinus griseus*) outside its nesting burrow at Pipinui Point, on the Wellington west coast. This is the true Muttonbird. Its main breeding grounds are to the south of the South Island, but small numbers breed in northern New Zealand and a few mainland colonies manage to survive.

[F. C. Kinsky

XLVII — Young Yellow-eyed Penguins (*Megadyptes antipodes*) in early January on the Otago Peninsula. Normally two eggs are laid in the shelter of rocks or vegetation.

IF. C. Kinsky

XLVIII — Adult Yellow-eyed Penguin incubating, late October, 1960, on the Otago Peninsula, which is near the northern limit of the rather restricted breeding range. This large, handsome species is found only in the New Zealand region.
